PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 4+ years of experience designing, implementing, and managing scalable cloud infrastructure on AWS. Proven expertise in building end-to-end CI/CD pipelines using Jenkins and GitHub Actions, orchestrating containerized workloads on Kubernetes, and automating infrastructure provisioning with Terraform. Demonstrated success in reducing deployment frequency from weekly to multiple daily releases, cutting infrastructure costs by 35%, and achieving 99.9% system uptime through robust monitoring and alerting strategies. Strong collaborator with cross-functional Agile teams in fast-paced product environments.

TECHNICAL SKILLS

Cloud Platforms	AWS (EC2, EKS, S3, RDS, Lambda, VPC, IAM, CloudWatch, Route53, ECR) GCP Azure
CI/CD Tools	Jenkins, GitHub Actions, GitLab CI/CD, ArgoCD
Containerization	Docker, Docker Compose, Docker Swarm, Docker Hub, ECR
Orchestration	Kubernetes (EKS, on-prem), Helm, kubectl, Kustomize
Infrastructure as Code	Terraform, AWS CloudFormation, Ansible
Version Control	Git, GitHub, GitLab, Bitbucket (GitFlow, trunk-based)
Monitoring & Logging	Prometheus, Grafana, Datadog, AWS CloudWatch, ELK Stack, PagerDuty
Scripting Languages	Bash/Shell, Python, YAML, Groovy (Jenkinsfile)
Security & Compliance	HashiCorp Vault, AWS IAM, OWASP, Trivy, SonarQube
Operating Systems	Linux (Ubuntu, CentOS, RHEL, Amazon Linux 2), Windows Server
Build Tools	Maven, Gradle, npm
Code Quality	SonarQube, OWASP ZAP, Trivy
Artifact Registry	Docker Hub, AWS ECR, Nexus Repository
Secrets Management	HashiCorp Vault, AWS Secrets Manager
Collaboration Tools	Jira, Confluence, Slack, MS Teams

WORK EXPERIENCE

Senior DevOps Engineer | xyz.com, Bengaluru
Aug 2022 – Present (2.5 Years) | Platform Engineering Team

- Architected and maintained CI/CD pipelines using Jenkins and GitHub Actions serving 15+ microservices, achieving deployment frequency of 12+ releases/day with 99.8% pipeline success rate
- Led Kubernetes (EKS) cluster migration for 40+ services, reducing infrastructure costs by 35% and improving deployment speed by 70%
- Automated AWS infrastructure provisioning using Terraform modules across dev/staging/prod environments, eliminating 100% of manual provisioning errors
- Implemented GitOps workflow using ArgoCD, enabling self-service deployments and reducing developer wait time from 4 hours to under 10 minutes
- Designed and deployed a centralized observability stack (Prometheus, Grafana, Alertmanager) with 50+ custom dashboards and SLA-based alerting, reducing MTTR by 45%
- Integrated Trivy and SonarQube in CI pipelines for automated vulnerability scanning and code quality gates, achieving OWASP compliance across 20+ services

- ▶ Configured and managed Docker container registry (ECR) with automated image lifecycle policies, reducing storage costs by 28%
- ▶ Built Ansible playbooks for automated Linux server hardening and configuration management across 80+ EC2 instances
- ▶ Established blue-green and canary deployment strategies using Kubernetes and AWS ALB, achieving zero-downtime releases for production services
- ▶ Managed HashiCorp Vault for centralized secrets management, eliminating hardcoded credentials across all application repositories
- ▶ Collaborated with 5 cross-functional Agile squads to define and implement SRE practices including SLOs, SLIs, and error budgets
- ▶ Mentored 3 junior DevOps engineers on Terraform best practices, CI/CD design patterns, and Kubernetes operations

DevOps Engineer | xyz.com, Pune

Jul 2020 – Jul 2022 (2 Years) | Cloud Infrastructure Team

- ▶ Built and maintained Jenkins-based CI/CD pipelines for 8 Java Spring Boot microservices, reducing release cycles from biweekly to daily
- ▶ Containerized legacy monolithic applications into Docker microservices, enabling modular deployment and reducing environment inconsistencies by 80%
- ▶ Provisioned and managed AWS infrastructure (EC2, VPC, RDS, S3, IAM) for 3 product teams using Terraform, supporting 99.5% uptime SLA
- ▶ Implemented ELK Stack (Elasticsearch, Logstash, Kibana) for centralized log aggregation across 25+ application services
- ▶ Configured Kubernetes Horizontal Pod Autoscalers and Cluster Autoscaler, handling 3x traffic spikes during peak load events without manual intervention
- ▶ Automated nightly backup workflows for RDS databases and S3 buckets using Python Boto3 scripts and AWS Lambda functions
- ▶ Established Git branching strategy (GitFlow) and pull request review standards adopted across 4 development teams
- ▶ Reduced AWS monthly cloud spend by \$12,000 through Reserved Instance planning, S3 lifecycle policies, and right-sizing EC2 instances

DEVOPS PROJECTS

Project 1: Flight Reservation Microservices Application

Technologies: Docker | Kubernetes | GitHub | Microservices Architecture | Helm | Jenkins

- ▶ Containerized 5+ independent microservices (booking engine, auth, payment gateway, notification, API gateway) using Docker with optimized multi-stage builds, reducing image sizes by 60%
- ▶ Deployed production-grade microservices on Kubernetes cluster with Helm charts; implemented rolling update strategy achieving zero-downtime deployments
- ▶ Configured Kubernetes Services (ClusterIP, LoadBalancer, Ingress) and NetworkPolicies for secure inter-service communication and external traffic routing
- ▶ Implemented Horizontal Pod Autoscaler (HPA) with custom CPU/memory thresholds, enabling the system to handle 5x peak load automatically
- ▶ Integrated Jenkins CI/CD pipeline triggering automated Docker image builds, Kubernetes deployments, and Helm chart upgrades on each GitHub merge

Project 2: EASY CRUD – 3-Tier Application Deployment

Technologies: Docker | Docker Compose | Linux | Git | MySQL | Terraform | AWS EC2

- ▶ Designed and deployed a production-ready 3-tier architecture (React.js frontend, Node.js REST API backend, MySQL database) using Docker Compose with isolated bridge networks per tier
- ▶ Containerized all three application layers with Docker; configured persistent volumes for MySQL ensuring data durability across container lifecycle events
- ▶ Provisioned AWS EC2 infrastructure using Terraform with automated security group configuration, enabling repeatable one-command environment setup
- ▶ Integrated backend APIs with MySQL using environment-variable-based connection management, eliminating hardcoded credentials from codebase
- ▶ Managed full release lifecycle using Git and GitHub with feature branching, semantic versioning, and automated tagging for every production deployment

CERTIFICATIONS

- ▶ AWS Certified Solutions Architect – Associate (SAA-C03) – Amazon Web Services, 2023

- ▶ Certified Kubernetes Administrator (CKA) – Cloud Native Computing Foundation (CNCF), 2023
- ▶ HashiCorp Certified Terraform Associate (002) – HashiCorp, 2022
- ▶ AWS Certified Developer – Associate (DVA-C02) – Amazon Web Services, 2022
- ▶ Docker Certified Associate (DCA) – Docker, Inc., 2021

EDUCATION

Bachelor of Technology – Computer Science & Engineering

Visvesvaraya Technological University (VTU), Bengaluru | Graduated: 2020 | CGPA: 8.7/10

LANGUAGES

English (Professional Working Proficiency) | **Hindi** (Native) | **Kannada** (Working Proficiency)
